CAVEAT: Pirate Websites and Knockoffs of the *Photon Sound Beam*

Since 1988, Integrated Healing Systems and our engineers have been creating, evolving and promoting a variety of Vibrational Energy Technologies prioritizing the *Photon Sound Beam* with the *Sound Probe*, *Original PSB*, *PSB IV*, *PSB VI*, *PSB VII*, *PSB VIII* and currently (since 2005) the *Photon Sound Beam XII* and *PSB Infinity RF*.

Knockoffs: Please be aware that there are several knockoffs of our previous Photon Sound Beam models as well as the *Photon Sound Beam XII*. These are copies that were reversed engineered from our previous and current models of the *Photon Sound Beam*.

The ***Photon Sound Beam Complete*** is a recent pirated knockoff version of our ***Photon Sound Beam XII***. It has a lot of bells and whistles, but simply has inadequate output voltage to the Glass Applicators. Several purchasers have noticed no sensation whatsoever coming out the handheld Plasma Tubes of the *PSB Complete*. We specialize in maximizing output voltage so maximize penetration deep into the body. This is critical in order to get fast and long-lasting results.

Pirate Websites: Please be aware of a Pirate Website www.PhotonSoundBeam.COM . This is a fraudulent website which has copied pictures and text (word-for-word) of our website in order to do a bait-and-switch operation. This site has an inoperative shopping cart which defaults to an 800 phone number in order to sell the 1994 prototype model called the *Original Photon Sound Beam*. Our website is www.PhotonSoundBeam.NET . We have never done any business with this website owner.

As mentioned, we specialize in maximizing the output voltage of the Plasma-Tube Glass Applicators. A threshold level of output energy is necessary for adequate penetration deep into the tissues and cells. Several purchasers and one of our distributors have noticed no sensation whatsoever coming out the handheld Plasma Tubes of the *PSB Complete*.

Our current models have a much more evolved, computer-chip circuitry than earlier mono-polar models. The *Photon Sound Beam XII* and the *PSB Infinity RF* come with 2 high voltage coils, one for each PlasmaTube Glass Applicator. This markedly improves the frequency integration and penetration and overcomes uncomfortable shocking effect. Using 2 Tesla Coils provides an omni-directional penetration as compared to single coil (mono-polar) instruments found in our previous models including the *Original PSB (1994 Prototype)*, still offered by several websites for \$2800. [See also the PSB compared to other instruments.](#)

PLEASE DO NOT MAKE THE MISTAKE of purchasing **ANY** Photon Sound Beam **OTHER THAN** our 2 available models: the Photon Sound Beam XII and PSB Infinity RF at www.PhotonSoundBeam.NET.

NOTE: We have distributors promoting our *Photon Sound Beams*.
